### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, 5-7, 14-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Chiba(6,489,942B1).

Chibana discloses an electro-optical display device comprising, inter alia, a plurality of pixels, a display panel(100), a plurality of scan lines(103), a plurality of data lines(102), a display driver(100), an instruction signal generation circuit(SHL, CL2, 201), a data latch(202-204), a data line drive circuit(206), a fetch-start-timing-setting-register(201) and a reference timing signal(CL2) which all function as claimed.

3. Claims 4, 8-13 and 16-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Moughanni et al, Nakano et al('513), Nakamura, Morita, Hiraga et al, Nakano et al('181B2), Kurokawa et al('657), Yamamoto et al, Kanazaki et al and

Art Unit: 2629

Shimizu are made of record to show various types of display panel utilizing some sort of a fetch-start-timing-register and a data latch.
